MEDIA RELEASE

Friday 5 September 2008

GARNAUT: START ON A 550PPM TRAJECTORY, AIM FOR 450PPM OR LOWER

Australia should put its strongest possible efforts into securing a global agreement to limit emissions to no more than 550 parts per million $CO_{2\text{-}e}$ and encourage the world onto a lower emissions path as soon as feasible, according to Professor Ross Garnaut's *Targets and Trajectories* report released today.

Launching the report at the National Press Club today, Professor Garnaut said that a global objective of 450ppm or lower would suit Australian interests better than a 550ppm goal.

"However, the Review has reluctantly concluded that international agreement on a global goal of 450ppm is not immediately feasible, given that emissions are currently around 455 ppm $CO_{2\text{-}e}$ and rising rapidly due to fast global economic growth," said Professor Garnaut.

Global Warming It's Not Easy!

French retailer in green labelling initiative

By Jane Byrne

16-Jun-2008 - **French retailer, Casino, has launched a carbon labelling initiative on a selection of its private label products.**

The labelling scheme, according to Casino, uses a colour code denoting the amount of carbon dioxide emitted in the manufacturer of a product's packaging, the amount of packaging to be recycled, and the amount of CO2 emitted in transporting the product in terms of truck kilometres.

The supermarket chain said the scheme was driven by its policy of enabling its customers to make an informed choice when purchasing goods.
